Keep your teeth – healthy and beautiful for life

Drilling to treat cavities means that healthy tooth substance is lost. Today, this does not have to be the case. If cavities are detected early enough, they can be treated painlessly and without drilling.

An attractive appearance will make you feel good: Healthy teeth for years to come.

Tooth maintenance is now easy and reliable

Gone are the days when cavities meant drilling. Today, modern dentists know more about the bacteria which cause cavities: How to prevent them, and how to treat them.

Your natural smile is irreplaceable

Attractive teeth, means a great smile. Everybody loves to look good. 75% of people asked believe: Healthy, attractive teeth strongly influence positive self-esteem, as well as success both socially and in your career.

Cavities – a destructive process hidden from view

Your enemy: Cavities & Co.

Protect yourself against cavities; by regular cleaning by trained professionals and by taking care of your teeth at home.

Cavities are like an iceberg

90% are hidden below the surface of the tooth. The tooth is destroyed from within, leaving the surface intact to all appearances. It is not true, that mechanically scratching the surface of the tooth with a probe always reveals the cavity, and X-rays do expose patients to radiation.

The new method uses: Laser light.

Learn just what goes on in professional teeth cleaning

- The dental professional starts with a thorough investigation of the teeth and gums.
- They remove hard and soft build-up of tartar and plaque.
- And now the laser is used:
The teeth are illuminated and investigated for cavities.
- All done!
Now a few tips for care at home.

Dental professional

Professional tooth cleaning. Laser early recognition and maintenance of tooth substance

Thorough examination of your teeth and appropriate treatment upon the first hint of a cavity

Prevention with a system.
A strong team for maintaining the health of your teeth

Proper care at home

Brushing well is not enough.
Follow the advice given by your dental team.
Use dental floss or small interdental brushes to remove deposits from between your teeth.
Cleaning your tongue minimises bacteria in your mouth and reduces mouth odour.

When preventative care is associated with well-being, visits to the dentist are not as daunting.

Professional teeth cleaning and early cavity recognition is an investment that pays off

Professionals say: Those who invest a little in preventative dental care are prudent. It's better to regularly spend a modest amount to maintain healthy teeth than pay a higher price later.

Axelsson study
(rate of cavities over six years in 5,000 patients)

Laser light reaches the smallest corner: Early recognition of cavities using DIAGNO

The laser sees what the eye misses. The laser penetrates the tooth without damaging it and illuminates the tooth substance measuring.

The device recognizes when there is a cavity. Healthy tooth substance fluoresces differently from a tooth with a cavity. If a cavity is found, the DIAGNOdent reacts emitting an acoustic signal and numerical reading. The whole process is pain-free.

Professional teeth cleaning and early cavity recognition by laser will soon become second nature.
